The current matrix can help you identify the methods or tools for **measuring outcomes that matter to patients & families**. In grey you can see what methods are the most appropriate for a specific area of impact.

		Tools for measuring outcomes that matter to patients & families				
		Qualitative methods	PROs	ClinROs	ObsROs	PerfOs
Area of impact*	Specific impact					
Mortality/survival	Mortality/survival					
	Objective signs					
Signs & symptoms	Subjective symptoms					
	Physical					
Functioning	Emotional					
	Social					
	Role					
	Cognitive					
	Global QoL					
	Perceived health status					
	Treatment experience	Treatment satisfaction				
	Adverse events/ side effects					
Resource use	Direct costs					
	Indirect costs					
	Societal/carer burden					
Patient journey	Patient journey					

\* The "areas of impact / specific impact" were developed in collaboration with an ongoing initiative being led by the [National Health Council](#) and adapted from the [Williamson Clarke Taxonomy](#).
